

Dehler 47

The Judel/Vrolijk design team developed this performance cruising yacht for the production builder Dehler and included a number of interesting options that are normally found only on yachts over 60 feet. For example, the large lazaret can be accessed either through a hatch on deck or by opening a transom flap that doubles as an extended boarding platform.

All sail-control lines are led belowdecks to the aft end of the

cockpit. An optional central winch system (CWS) invented by Dehler, which is found on many larger yachts, can further refine the sailhandling system. Joinery belowdecks is high-quality cherry veneer. There are three-

and four-cabin layouts, each with two well-appointed toilet compartments, one of which has a separate head and shower. **Dehler North America**, 2129 S. Canal Street, Chicago, IL 60616; tel. 773-384-2357, www.dehler.com
